

concepto de SDN

IBARRA SABIDO JOSE MARIA | **Fundamentos de Telecomunicaciones** | 23-11-2020

They are defended as a previous programming to generate a behavior of the network that allows it to be controlled by means of API applications, in the same way it is known as an agile network architecture defined for the dynamic rhythm of today's applications, which seeks to reduce the complexity of networks since in among other things it automates the network functions, in conclusion, software-defined networks come to improve the operation in this continuous technological expansion.

There are areas where this technology makes a difference such as serious network programmability, openness, etc.
